

Announcing a new program for  
home-grown, renewable energy

# GREEN POWER ENERGY

*From Lanesboro Public Utilities*

Lanesboro Public Utilities  
202 Parkway Ave S.  
PO Box 333  
Lanesboro, MN 55949

The United States possesses abundant renewable energy resources, including wind, solar, biomass, methane, solid waste, and wood. Renewable energy can be used to generate electricity, replacing some of the coal, natural gas, and petroleum that we currently use and often import from other nations. **The Lanesboro Public Utilities itself contributes to the renewable energy when we generate from our hydro-wheel. Our own utility generates towards a cleaner environment!**

Now you as an individual customer can support electricity produced from certified renewable energy facilities. For your contribution of just \$2.00/month:

- ☐ 100 kilowatt hours of clean, green, renewable energy is produced. This replaces electricity produced from fossil fuels imported from other states and nations.
- ☐ 150 pounds of carbon dioxide will NOT be emitted. Carbon dioxide is a major greenhouse gas associated with global climate change. AND 14.6 pounds of sulfur dioxide will be avoided. Sulfur dioxide in the air can create acid rain.
- ☐ And jobs, income and economic development will be fostered in the Midwestern rural economy through the addition and operation of renewable energy facilities.

Wind power and other renewable energy still costs a little bit more to produce than electricity produced from other sources. This is why your contribution can help defray the extra costs of renewable energy, by participating in Green Power Energy from Lanesboro Public Utilities, you are investing in a cleaner, greener world.

**SIGN UP FOR GREEN POWER ENERGY AND HELP MAKE A DIFFERENCE FOR THE ENVIRONMENT!**
